6th CDE Programme

Date : 19th August 2016

Organised By

Department of Periodontology & Implantology

And

Dear Delegates,

Osseointegration, the brain child of Branemark, has revolutionized the clinical practice of dentistry. Because studies have documented their predictability and successful long-term outcomes, dental implants are rapidly becoming an alternative to traditional prostheses and are one of the preferred treatment options for replacing missing teeth in both partially and completely edentulous ridges.

The implant industry has greatly advanced, and new dental implant systems have been introduced into the market. We have seen a huge increase in scientific knowledge about the biological and biomechanical factors associated with implant success.

Although dental implants have improved the quality of life of many patients, a wide body of literature has reported their associated morbidity. Studies have also documented the association of complications with surgical implant procedures and prosthetic rehabilitation. Management of complications can be challenging and often requires a combination of surgical and prosthetic approaches.

The current 6th CDE Programme focuses on various aspects of implantology which includes Basic Implantology, Patient selection for Implants, Immediate Implants, Advanced implantology, Complications and their Management. Through this effort, we aim to assist clinicians in identifying and treating undesirable presurgical, intra-surgical and postsurgical problems

TIME	EVENTS
08:00am-09:00am	Registration and Breakfast
09:00am-10:30am	INAUGURATION
10:30am-11:45am	Basic Implantology
11:45am-01:00pm	Patient Selection For Implant
01:00pm-01:30pm	Lunch
01:30pm-02:30pm	Immediate Implants
02:30pm-03:15pm	Advanced Implantology
03:15pm-04:30pm	Complications & Management of Implants
04:30pm	Valedictory Function

Registration fees: Rs.650/-

(Inclusive of Guest Lecture, Breakfast & Lunch)
